**Idstein, February 2019** – In many of the most exciting and interesting travel destinations, mosquitoes aren't just a bother, they're a real threat. Every year more than 700,000 people around the world die of mosquito-borne diseases like malaria, Zika and yellow fever.

A white banner with a black outline and wavy ends, containing the text 'MOSQUITO PROOF' in a bold, black, sans-serif font.

## MOSQUITO PROOF

For the upcoming season JACK WOLFSKIN developed innovative **MOSQUITO PROOF technology**. The material is **not chemically treated**; instead, it's **woven so tight** that it is physically impossible for a mosquito to bite through it. It's **healthier** than chemicals, and the protection **can't wash out**.

The fabric is a 74 % polyamide and 26 % cotton blend that is **light** and **pleasant on the skin**. It gives protection from mosquito bites as well as UV radiation.
